TECHNICAL SKILLS

Software Development

Slack, Git, Trello

Databases

Mongo

Technologies & Frameworks

Node, React, Express, Redux, GraphQL,
StyledComponents, Strapi

Continuous Integration/Deployment

Heroku, Netlify

Design

Figma

Programming Languages

JavaScript, HTML, CSS

PROJECTS

FITNESS-APP

- This is the project that I am currently building. The project will be used to connect gym trainers and nutritionists to clients
- The backend is Node, Express and Mongo while the frontend will be in React and redux.
- Here are the links to GitHub repositories for [frontend](#) and [backend](#)

E-COMMERCE

- This was an e-commerce app that I built with features like the ability to see all products, filter products by category, add products to cart, manipulate cart items and ability to delete items in the cart.
- The project was built with ReactJs, GraphQL, redux and StyledComponets
- Here is the GitHub link to the [project](#)

SHOPPING LIST

- This is a shopping list app that allows you to create shopping list, shopping list items and delete them
- The project was built with ReactJs, Strapi, Material Ui
- Here is the GitHub link to the [backend](#) and [frontend](#)

BREAKING-BAD

- Breaking bad app shows breaking bad TV series characters attributes and their description for example name, nickname, birthday and their status whether dead or alive
- To get their attributes, one can search each character by his/ her real name.

- This app was built using React.js
- Here is the GitHub URL for breaking bad app [Breaking-bad](#)

BIRTHDAY-COUNTDOWN

- This is a simple birthday app that displays the remaining time to my next birthday.
- This app was built using React.js
- Here is the github url for the birthday countdown [Birthday countdown](#)

WEATHER-APP

- This weather app provides a local weather forecast in Celsius and Fahrenheit. It shows the last 3 days and the next 3 days weather forecast.
- To build this app I used React.js.
- Here is the github url for the weather app [weather](#)

FULL STACK TODO APP

- Todo App is an app that allows users to add, edit and delete tasks they want to work on.
- One can mark tasks as complete without deleting them.
- This app was built using React.js and node js
- Here is the github url for the full stack app [todo](#)

CALCULATOR REACT

- The calculator app provides simple and advanced mathematical functions in a beautifully designed app. It performs basic calculations such as addition, subtraction, multiplication and division.
- This app was built using React.js
- Here is the github url for [calculator app](#)

EXPERIENCE

Brainnest 2022 May - June-2022 -Intern Frontend Software Developer

- Design, build, test, deploy and maintain mission-critical, customer-facing web application
- Adjust different approaches dependent on project requirements
- Analyse project requirements, design documents and maintain software specifications as a member of the project development team.
- Use different technologies and tools to support the delivery of high-quality software

Tropiflora Limited Kenya 2017 Dec-2018**-Intern on Human Resources****-Procurement**

- Assembling specification of requirements from various departments.
- Identifying sources of raw materials needed.
- Selecting and evaluating the potential supplier for certain items.
- Negotiating with suppliers to get contracts at the best offer.
- Inspecting the goods and services to confirm whether they meet their specification.
- Posting data for day-to-day activities of the organization and for future reference and comparison.
- Filing and record keeping.

EDUCATION

Moringa School 2021 June – 2021 July

Introduction to Software Engineering

German Institute of Professional Studies 2017 to date

Human Resource Management

St Paul's University 2017 Jan-2017 April

Youth Career and mentorship
